Experience

Career Break — *August 2018–Present*

Travelled around the world, undertook a period of training to consolidate my skillset and cared for my late wife, who died in February 2023.

Amundi Asset Management • Senior Analyst – VP — *October 2010–July 2018*

Front Office Analyst/Developer embedded in the Fund of Hedge Fund quant team.

Solely responsible for the business-critical application suite (Momentus), used by the internationally based Front Office team and the Fund Manager. Momentus monitored fund performance, analysed risk, tracked potential investments, recorded invested funds positions/trades, managed documents, and generated reports, including fund factsheets.

- Resolved the technical issues that had prevented my predecessors releasing changes into production for over a year.

- Subsequently re-architected the suite and devised DevOps CD/CI pipelines for what eventually became 20 application components and APIs/services; enabling me to achieve a regular weekly cadence of feature releases into production.

- Successfully migrated from obsolete, out of support servers to modern platforms, including the cloud and SharePoint Online.

- Expanded the capabilities and aided the investment decisions of the Fund Manager and the team by implementing new features such as Portfolio Construction, Fund Analysis, Factsheet Generation, and Risk Calculation modules.

- Introduced daily pricing to the application suite that had originally been engineered for monthly fund evaluation, enabling the company to launch new alternative UCITS funds.

Acropolis Systems • Independent Consultant — *July 1993–October 2010*

Clients include, but not limited to:

Schroders Investment Management	*Architect - Project Symphony – Data Reception module*
	Designed the daily load and validation of all of Schroders' positional and transaction data records from JP Morgan. Achieved the key constraint of efficiently processing 400,000 data records within a narrow time frame.
	Designer and Programmer - Book of Records – Asset Classification
	Enabled Schroders to offer client fund valuations from different bespoke perspectives.
British Airways Pensions	*Analyst and Developer: Custodian Instruction and PM's daily valuation*
	Part of a team responsible for implementing Thomson Reuters' Portia and Open Trader. Devised the migration strategy for the pricing spreadsheets to newer technology.
Affinity Systems and Development	*Architect and Programmer: Project Management Cost Projections system*
	Property Management Valuation and Performance suite
Dunstan Thomas	*Analyst, Consultant and Trainer: Consultant and Trainer*
Quintiles (UK)	*Team Leader, Architect, developer: Global integrated business CRM*
